

You are required to customize an **arm** toolchain for your project.

Make sure it support:

- Musl library
- Make
- Strace

Check your output in x-tool

In readme file I need you to explain:

- Sysroot
- Binutil

In order your build complete successfully you are required to download some application and library on your system.

```
sudo apt install build-essential git autoconf bison flex texinfo help2man gawk \  
libtool-bin libncurses5-dev unzip
```
